

2021 WESTERN

CATALOG

The following information is designed to assist you in making the best possible bit selection. We believe, however, that one factor is paramount to the function of a bit; good horsemanship requires proper use of all the aids used to cue the horse to perform. This includes the type of hands that initiate the pull of the bit. You will find the bits are organized by level and then by bit type.

MILD EFFECT	MODERATE EFFECT	MODERATE to STRONG EFFECT	STRONG EFFECT	VERY STRONG EFFECT

BASIC BIT TYPES

	Full Cheek Snaffle - For the traditional Hunter look, the Full Cheek Snaffle is available in a variety of mouth pieces. Each mouthpiece determines the function of the bit. The full cheeks prevent the cheeks from pulling through the horse's mouth. And, when fitted with bit loops that attach to the bridle, the bit becomes more stable for increased lateral control.		Tom Thumb Snaffle - One of the most basic shanked type snaffle bits, the Tom Thumb Snaffle serves as an excellent transition bit from a Ring Snaffle to a longer shanked snaffle or to a Curb Bit. This bit uses a small amount of curb pressure or leverage. The loose cheeks move independently allowing for more lateral flexibility.
	Kimberwick - Commonly seen today in the English events of breed association horse shows, the Kimberwick uses a curb chain for increased leverage. The Uxeter Kimberwick has two rein slots, each changing the desired result. The upper slot is used to increase the pressure on the tongue, while the lower slot is used to increase leverage and curb chain pressure.		Double Rein Bit - The Double Rein Bit, as its name implies, can be used with four reins. For normal use, the reins are attached to the shanks. With the dee rings located at the mouthpiece, the second set of reins helps achieve more snaffle action.
	Pelham - The Pelham bit, with its double set of reins, combines the function of a snaffle and the action of a curb bit. The top rein provides snaffle pressure to the tongue and corners of the mouth, while the bottom rein increases leverage and curb chain pressure.		Curb Bit - The Curb Bit, one of the major bit types, is considered a leverage bit because of the action of the curb chains. When the reins are pulled and the curb chain is engaged, it applies pressure to the chin groove. The term Grazing Bit is commonly referred to as a Curb Bit with the bit shanks bent back to allow the horse to graze.
	Eggbutt Snaffle - A very mild bit, the Eggbutt Snaffle is designed wide enough to be gentle on the bars and will not pinch the horse's mouth.		Gag Bit - The sliding action of the Gag Bit applies pressure to the lips and corners of the mouth. This action along with the give and take of the rider's hands help elevate the horse's front end. Some Gag Bits offer variable rein loops for greater lateral pull.
	Ring Snaffle - A functional bit for all types of training, the loose rings of a Ring Snaffle help increase the bit movement, promote salivation and keep the mouth soft and the body supple.		Hackamore - The Hackamore is designed to create pressure just above the soft tissue of the nose. When the curb chain is engaged, it also applies pressure to the chin groove. It is designed for getting quick stops from forward motion. Hackamores are available with a variety of nose bands from moderate to severe. They include fleece lined leather, flat leather, rubber, bicycle chain covered with rubber or plastic, laced leather, braided leather or rope. When combined with a mouthpiece, the Hackamore gains more lateral control.
	Dee Ring Snaffle - One of the most basic forms of biting, the Dee Ring Snaffle is a relatively mild snaffle that comes in a variety of mouthpieces. Whether you are starting a horse, or just going back to the basics, this bit helps with lateral movement while achieving suppleness from jaw to tail.		

BASIC MOUTHPIECES

	Low Port & Medium Port These mouthpieces are relatively mild. The curvature of the port allows for tongue relief (applying minimal pressure across the width of the tongue). Also, with rotation of the bit, the mouthpiece does not apply palate pressure (applied to the roof of the mouth). Both mouthpieces will, however, apply pressure to the bars of the mouth that increase in severity as the mouthpiece diameter becomes smaller.		Roller Also termed as a "Cricket" mouthpiece, the Roller is commonly made of copper and can be combined with Medium and High Ports, Snaffle Mouths, Half-breeds and Spades. This mouthpiece will apply tongue pressure as it lays across the tongue. It is an ideal mouth piece to pacify nervous horses and at the same time promotes salivation.		Correction The Correction mouth, when used as part of a leverage bit, can be considered severe because it applies tongue pressure at the flexible joint of the port and bar pressure.		Snaffle The Snaffle configuration by itself is a mild bit and one of the most universally used mouthpieces. It can be thick and mild on the bars and tongue when covered with rubber, or severe if used as a thin twisted wire mouthpiece. It can be combined with many variations such as a Copper Roller, Dr. Bristol, Dog Bone, or Lifesaver mouthpiece.		Mullen Mouth This mouthpiece provides some tongue relief and does apply bar pressure. It is recommended for horses that dislike palate pressure	
							Pinchless Bits offer major benefits over traditional bits because each side rotates independently. This enables much clearer communication. The bit corrects and instructs by pressure rather than pain avoidance which eliminates confusion and stress leading to better learning, control and performance.		High Port Just as the Low and Medium Port mouthpieces provide tongue relief and apply pressure to the bars of the mouth, so does the high port.	

Fonck METALAB® PERFORMANCE HORSES

Bernard Fonck is a reining phenomenon. Originally from Belgium, he has quickly risen through the ranks to become the first European-based trainer to achieve the status of National Reining Horse Association (NRHA) Two Million Dollar Rider. Bernard has been competing in European and North American NRHA events since 2002, earning multiple titles over those years. He is a seven-time NRHA World Open Champion and a multiple World Equestrian Games medalist, winning Individual Gold in 2018 and Team Silver for Belgium three times.

Bernard credits his wife, Ann Poels, as the key to his success. An accomplished competitor in her own right, Ann is the trainer for "Team Fonck". "She is very special; she supports me in every way," says Bernard. "She is the best."

Currently, Bernard and Ann are working with Metalab to design a progressive series of bits that will take a horse through all levels of training and competition. This bit series will bring a new level to reining. As Bernard relates "I have been using Metalab bits in my barn already, but nothing like what we are designing now. For this series, the bits are designed as steps from one level to the next, a line that you can use forever, with any horse at each level."

601F01 / 601F02 LEVEL ONE ■

Bernard Fonck O-ring snaffle bit, copper inlays.

MOUTHPIECE: 5-1/8"
MOUTH THICKNESS: 601F01: 10mm 601F02: 12mm
RING: 2-1/2"

601F03 LEVEL ONE ■

Bernard Fonck correctional bit with spoon, copper covered bars, medium cheeks engraved.

MOUTHPIECE: 5-1/8"
MOUTH THICKNESS: 11mm
CHEEK: 7-1/2"

A good bit is essential when it comes to riding, it should not irritate or disturb the horse. Therefore, finding the right bit can be quite a challenge. That is why I decided to collaborate with Metalab and create a set of bits, which are perfect for the all-round western sport - ranging from really soft ones to beautiful show bits.

I am happy to introduce these bits that horses can easily accept, while performing with a nice and natural headset. Meanwhile, the shanks of our bits ensure your reins don't move, which allows you to ride with a nice slack rein. I enjoy the Stefanie Bubenger Bits by Metalab in every single occasion and I hope you may as well.

*Sincerely,
Stefanie Bubenger*

REINING COLLECTION

FRANCOIS GAUTHIER

With over 25 years' experience, this Canada native has won some of the most prestigious reining titles, such as silver in the 2002 World Equestrian Games, Champion in the 2004 AQHA All American Congress, and Reserve Champion in the 2004 NRHA Open Futurity. Francois has over \$500,000 in career winnings and is among the top 25 lifetime National Reining Horse Association earners. Gauthier now owns and runs a 150-horse operation at Sunny Pines Farm in North Carolina, while also working in close partnership with Partrade to develop a full line of equestrian items dedicated to professional riding.

JOSIANE GAUTHIER

Daughter of Francois Gauthier, Josiane is an expert breeder and rider. By managing over 7 stallions and 200 mares, Gauthier has developed an innate ability to produce well-balanced foals. She has used this ability in the ring with Non-Pro horses, earning Reserve Champion at the NRHA Futurity, 3rd in the NRHA Derby, Champion in the Florida Classic two years in a row, and has gained over \$360,000 in her lifetime earnings. Josiane now concentrates on training Futurity prospects for Open and Non-Pro competitors, while also showing in all major NRHA and AQHA events.

JONATHAN GAUTHIER

Owner of JG Reining Horses and co-owner of Prospects Unlimited, LLC, Jonathan Gauthier has spent over ten years operating successful horse training and showing businesses. Currently located at Sterling Ranch in Aubrey, Texas, Gauthier earned the status of Top 20 NRHA Professionals, won several prestigious individual titles, and coached the French and Danish Reining Teams to international success.

001923 LEVEL ONE ■

Clinician O-Ring snaffle bit anatomically shaped with rubber covered bars, Pinchless system and protection at the corners of the mouth. The best bit to start a young horse.

MOUTHPIECE: 5-1/8"-5-1/2" (130mm-140mm)
MOUTH THICKNESS: 11mm
RING: 3"

601101 LEVEL ONE ■

Clinician O-ring snaffle bit anatomically shape. Pinchless system and protection at the corners of the mouth.
